

## Low-code integration

Checkout requires minimal coding and is the best choice for most integrations because of its prebuilt functionalities and customization options. You can integrate Checkout by creating a Checkout Session and collecting customer payment details. Collect payments by redirecting customers to a **Stripe-hosted payment page**.

**Compare Checkout** to other Stripe payment options to determine the best one for you. Checkout displays a payment form to collect customer payment information, validates cards, handles errors, and so on.

## Built-in and customizable features

Stripe Checkout has the following built-in and customizable features:

### Built-in features

- ✓ Support for digital wallets and Link
- ✓ Responsive mobile design
